TIER 5-7 2003

Science test Paper 1

Please read this page, but do not open the booklet until your teacher tells you to start. Write your name and the name of your school in the spaces below.

First name	
Last name	
School	

Remember

- The test is 1 hour long.
- You will need: pen, pencil, rubber, ruler, protractor and calculator.
- The test starts with easier questions.
- Try to answer all of the questions.
- Write all your answers on the test paper do not use any rough paper.
- Check your work carefully.
- Ask your teacher if you are not sure what to do.

For marker's use only

Total marks

1. The drawings show a human, a chaffinch, a dog and a whale.

not to scale

One of these animals is a bird. The other three are mammals.

(a) Which group do all four animals belong to?

1 mark

(b) The drawings below show the bones of the front limbs of the four animals. Some of the bones of the human limb are labelled.

 (a) When tobacco is burned in cigarettes, carbon monoxide is formed. A device called a 'Smokerlyzer' measures the percentage of carbon monoxide in a person's breath. This indicates the percentage of carbon monoxide in the person's blood.

> Four people tested their breath using a 'Smokerlyzer' as shown below. They repeated the test every two hours during one day at work.

The results are shown in the table.

name	percentage of carbon monoxide in the blood				
	9 am	11 am	1 pm	3 pm	
Amy	3.6	2.9	3.4	2.8	
Don	1.8	1.3	1.2	1.2	
Kisham	6.3	5.0	4.3	3.8	
Pat	0.5	0.3	0.3	0.3	

	(i)	Look at the table opposite. Which two people are most likely to have smoked tobacco before 9 a	am?
		and	1 mark
	(ii)	Don says he is a non -smoker. Suggest one other way carbon monoxide could have got into Don's blood before he came to work that day.	
			1 mark
(b)	Re If ti will	d blood cells transport oxygen from the lungs to the muscles. ne air we breathe in contains carbon monoxide, the red blood cells I take up carbon monoxide instead of oxygen. e this information to explain why, when they are running, many	
	sm	okers become out of breath sooner than non -smokers do.	
			2 marks
			_
			_

3. (a) The diagrams below show an animal cell and a plant cell.

(i) The lines from the boxes show the positions of two of the parts that are present in both cells.In the boxes, write the names of these **two** parts.

2 marks

(ii) Give the names of **two** parts that are present in plant cells but **not** in animal cells.

2 marks

- 1. _____
- 2. _____

(b) Organs can carry out their functions because of the special cells they have.

Draw a straight line from the name of each type of cell to the function of the cell and then to the process it carries out. One has been done for you.

3 marks

maximum 7 marks

4. Shuli investigated differences between physical and chemical changes.

She put three chemicals in separate crucibles and weighed each one. She heated each crucible as shown below.

She weighed each crucible again when it had cooled down.

She recorded her observations in a table as shown below.

experiment name of chemical observations		observations	change in mass
Amagnesium (a silvery solid)The bit A 		The silvery magnesium burned brightly in air. A white powder was formed.	increase
		The purple crystals crackled and turned black. A colourless gas was given off.	decrease
		The white powder turned pale yellow on heating. It turned white again on cooling.	no change

(a)	(i)	In experiment A, magnesium reacts with a gas in the air.	
		Complete the word equation for the reaction in experiment A.	
magı	nesi	um +→	2 marks
	(ii)	Explain the increase in mass in experiment A. Use your word equation to help you.	1
			1 mark
(b)	The Giv	e gas given off in experiment B re-lit a glowing splint.	
			1 mark
(c)	Nai	me the white powder left at the end of experiment C.	
			ı mark

(d) In each experiment, did a chemical change or a physical change take place?
Tick one hav for each experiment.

Tick **one** box for each experiment.

experiment	chemical change	physical change
А		
В		
С		

1 mark

5. (a) Methane can be a gas, a liquid or a solid. In the diagram below, arrows P, Q, R and S represent changes of state.

The boxes on the right show the arrangement of particles of methane in the three different physical states. Each circle represents a particle of methane.

physical state of methane

gas P Q

arrangement of particles

\sim
\bigcirc

 Draw a line from each physical state of methane to the arrangement of particles in that physical state.
 Draw only **three** lines.

1 mark

(ii) Arrows P, Q, R and S represent changes of state. Which arrow represents:

2 marks

evaporation? _____

melting? _____

(b) Methane is the main compound in natural gas. The scale below shows the melting point and the boiling point of methane.

maximum 7 marks

6. The back window of this car contains a heating element. The heating element is part of an electrical circuit connected to the battery of the car.

The diagrams below show **two** ways of connecting the circuit of a heating element.

circuit A

circuit B

1 mark

(a) Give the name of each type of circuit:

circuit A _____

circuit B _____

(b) A wire gets broken at point X on circuit A and at point Y on circuit B.

circuit A

circuit **B**

When the switch is closed, how does the broken wire affect the heating element in:

		1 mark
(i)	circuit A?	

1 mark (ii) circuit B? _____

- (c) In very cold weather, ice may form on the back window of the car. When the heating element is switched on, the ice will disappear and the surface of the window will become clear and dry.
 - (i) Fill the gap below to show the energy transfer that takes place.

When the heater is switched on, ______ energy is

transferred	from the	wires to	the ice.
liunsieneu		100 10	110 100.

(ii) As the window becomes clear and dry, physical changes take place in the ice.

Fill the gaps below to show the physical changes which take place.

from	to		to

1 mark

7. The diagram below shows the orbits of Neptune, Pluto and the Earth. At two points, A and B, the orbits of Neptune and Pluto cross over each other.

(a) What force keeps planets in orbit around the Sun?

1 mark

1		2 marks _
2		_
(1	Tom can see the Sun because it is a light source. It gives out its own light. Neptune and Pluto are not light sources but Tom can see them when he looks through his telescope.	_
	Explain why fom can see Neptune and Pluto even though they are not light sources.	2 marks –
		_
(1) Between points A and B, Pluto is nearer than Neptune to the Earth. Tom noticed that Pluto is not as bright as Neptune, even when Pluto is closer than Neptune to the Earth.	

Give **one** reason why Pluto is **not** as bright as Neptune.

1 mark

maximum 6 marks

8. Joe saw two types of swing in the park.

He noticed that the time for one complete swing, forward and back, was different for the two types of swing.

He did **not** know whether the length of the chains or the mass of the person affected the time for one complete swing.

He made model swings and measured how long it took for 10 complete swings in 4 investigations.

Here are his results.

	investigation			
	Α	В	С	D
length of string, in cm	25	25	50	75
mass of plasticine, in g	100	50	100	100
time for 10 complete swings, in s	10.0	10.0	14.2	17.4

Here is Joe's conclusion:

(a) Which **two** of his investigations, A, B, C or D, provided evidence to support his conclusion?

ام من م		
and		

(b) Look at the results table.

(i) Describe how the length of the string affects the time for 10 complete swings.

(ii) Which three of his investigations are best evidence for this?

_____ and _____ and _____

 Use his previous table of results to predict the times for 10 complete swings in two further investigations E and F.
 Write your answers in the table below.

maximum 4 marks

(m)	Giv	e one function of water in the body
	GIV	
(b)	Peo cor As	ople can be injected with a vaccine against cholera. The vaccine ntains a tiny amount of the cholera poison and not the cholera bacteria. a result, people become immune to cholera.
	De	scribe how vaccination makes a person immune to cholera.
(C)	The vac mix for imr	e cholera poison makes the skin permeable. A new method of ccinating against cholera is to put a small amount of the poison, ked with other vaccines, on a plaster. The plaster is left on the skin a day. The vaccines pass through the skin and the person becomes mune to cholera and to other diseases.
	(i)	Why should only a tiny amount of the poison be used?
	(ii)	Suggest one advantage of vaccinating people in this way.

10. The quagga is an extinct animal that lived in Africa. Quaggas belonged to the same group as zebras.

The drawings below show a zebra and a quagga.

- (a) Zebras and quaggas used to breed with each other. The offspring contained a combination of both zebra and quagga genes (genetic information).
 How were zebra and quagga genes passed on from the parents to their offspring?
- 1 mark
- (b) These days there are some zebras that still show some quagga features. Scientists are using zebras to try to produce quaggas by selective breeding. Describe the steps in this selective breeding process.

3 marks

maximum 4 marks

11. (a) Complete the word equation below for the reaction between calcium carbonate and hydrochloric acid.

1 mark

calcium	+	hydrochloric \rightarrow	+	carbon + water
carbonate		acid		dioxide

Limestone is mainly calcium carbonate. It is weathered by acids in the air or in soil.

(b) In June 1990, a year 9 class planned a long-term investigation into the chemical weathering of limestone by acids in soil.

They put limestone chippings of similar size in three nylon mesh bags. They buried the bags outside in soils of different pH.

sample A in soil of pH 5

sample B in soil of pH 7

sample C in soil of pH 8

(i) Chemical weathering took place in sample A, and the mass of the sample decreased.

Give the reason for the decrease in mass. Use the word equation above to help you.

1 mark

(ii) The pupils predicted that chemical weathering would **not** take place in samples B and C.

Give the reason for their prediction.

1 mark

(iii) Some chemical weathering did take place in samples B and C.

What could have changed the conditions in these soils to cause weathering to take place?

1 mark

(c) The table shows how the mass of each sample changed between the years 1990 and 2000.

	mass, in g			
year	sample A, at pH 5	sample B, at pH 7	sample C, at pH 8	
1990	1000	1000	1000	
1995	980	992	997	
2000	960	984	995	

In 2000, a year 9 class buried another identical 1000 g sample of limestone chippings in soil of pH 6.

(i) Use the results in the table to predict an approximate value for the mass of this sample in 2010.

1 mark

_____ g

(ii) Why is it **not** possible to be certain what the mass of this sample will be in 2010?

1 mark

maximum 6 marks

12. A group of pupils placed pieces of metal wire in different salt solutions. They recorded their observations in the table below.

experiment	1	2	3
diagram	copper wire silver nitrate solution	zinc wire lead nitrate solution	copper wire lead nitrate solution
observations	crystals of silver formed on the wire	crystals of lead formed on the wire	no change

(a) From these observations, write the order of reactivity of the four metals, copper, lead, silver and zinc.

least reactive

2 marks

(b)	The pupils then dipped a new piece of each of the metal wires into dilute hydrochloric acid.	
	Only one of the metals reacted. Which metal was this?	1 mark
(C)	One pupil predicted that there would be no reaction when he put a piece of zinc wire into a solution of silver nitrate.	
	Was his prediction correct? Explain your answer.	1 mark
(d)	In nature, gold is never found combined with other elements.	
	Where should gold be placed in the reactivity series in part (a)? Explain your answer.	
		1 mark –

maximum 5 marks

A remote-controlled car was timed over a period of 10 seconds.
 A graph of **distance** against **time** is shown below.

(a) Describe the motion of the car between:

(i) 2 seconds and 6 seconds	1
(ii) 9 seconds and 10 seconds	<i>.</i> .
	1 mark
Calculate the average speed of the car between 0 and 10 sec	onds
Give the unit.	2 marks

(b)

(c) The diagram below shows **two** of the forces acting on the car when it is moving.

(i) When the motor was switched off, the car slowed down and then stopped.

While the car was slowing down, which of the following was true? Tick the correct box.

1 mark

Friction was zero and the forward force was greater than zero.			
The forward force was zero and friction was greater than zero.			
Friction was zero and the forward force was zero.			
The forward force and friction were both greater than zero.			
Use the graph to find the time when the car started to slow down.			

1 mark

The car started to slow down after ______s.

maximum 6 marks

6

(ii)

14. Alex has a 100 cm ruler pivoted at the centre. She ties a balloon filled with carbon dioxide 16 cm from the pivot, as shown below.

The total weight of the balloon and carbon dioxide is 0.06 N.

 (a) The ruler becomes unbalanced. Calculate the turning moment the balloon produces about the pivot on the ruler. Give the unit.

2 marks

(b) Alex ties another similar balloon, filled with helium, 48 cm from the pivot. The helium balloon exerts an upward force on the ruler. The ruler is balanced as shown below.

END OF TEST
