Science test

Paper 1

First name

Last name

School

Remember

- The test is 1 hour long.
- You will need: pen, pencil, rubber, ruler, protractor and calculator.
- The test starts with easier questions.
- Try to answer all of the questions.
- The number of marks available for each question is given below the mark boxes in the margin. You should not write in this margin.
- If you are asked to plan an investigation, there will be space for you to write down your thoughts and ideas.
- Do not use any rough paper.
- Check your work carefully.
- Ask your teacher if you are not sure what to do.

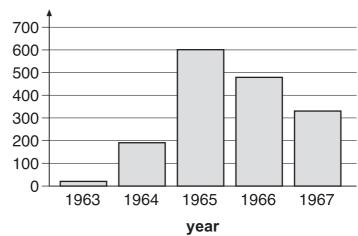

For marker's use only

1. The table below shows the number of boats used for catching herring fish in the Norwegian Sea between 1963 and 1967.

| year | number of fishing boats |
|------|-------------------------|
| 1963 | 16 |
| 1965 | 284 |
| 1967 | 326 |

The bar chart below shows the total mass of herring caught in the Norwegian Sea between 1963 and 1967.

mass of herring caught (thousands of tonnes)

Use the information above to help you answer parts (a) (i), (ii) and (iii).

(a) (i) Why did the mass of herring caught increase between 1963 and 1965?

1 mark

(ii) Suggest why the mass of herring caught decreased between 1965 and 1967.

4. (a) The table below shows the melting points and boiling points of four elements.

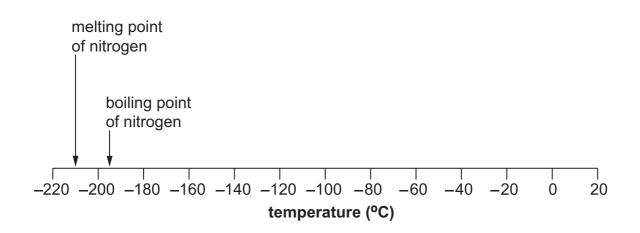

| element | melting point (°C) | boiling point (°C) |
|-----------|--------------------|--------------------|
| aluminium | 660 | 2520 |
| iron | 1540 | 2760 |
| magnesium | 650 | 1100 |
| mercury | -39 | 357 |

When answering the questions below, you may give the name of an element more than once.

Which element in the table is:

- (i) a liquid at 0°C?
- (ii) a solid at 1500°C?
- (iii) a gas at 500°C?
- (iv) a liquid over the biggest temperature range?

(b) The melting point and boiling point of nitrogen are marked on the scale below.

(i) **Draw an arrow** on the scale above to show the temperature at which water freezes.

(ii) When water is a liquid, what is the physical state of nitrogen? Tick the correct box.

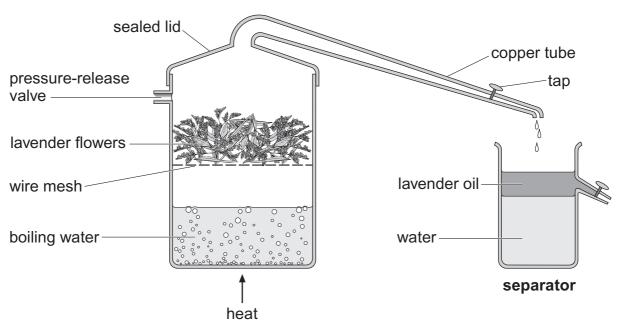

(iii) What is the physical state of nitrogen at -200°C? Tick the correct box.

| solid | | liquid | | gas | |

5. Lavender oil is a perfume obtained from lavender flowers. Steam at 100°C is passed through the flowers in the apparatus below.

not to scale

Water vapour and lavender oil vapour pass down a copper tube towards a separator.

(a) (i) The lavender flowers are heated in a container with a sealed lid.

Why must the lid be sealed?

(ii) What would happen if the container did ${f not}$ have a pressure-release valve?

(b) Lavender oil vapour and water vapour cool as they pass down the copper tube.

A mixture of lavender oil and water collects in the separator.

| (i) | What is the change in the physical state of both lavender oil vapour |
|-----|--|
| | and water vapour as they cool? |

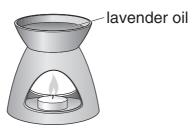

| from | to |
|--------|----|
| 110111 | ιυ |

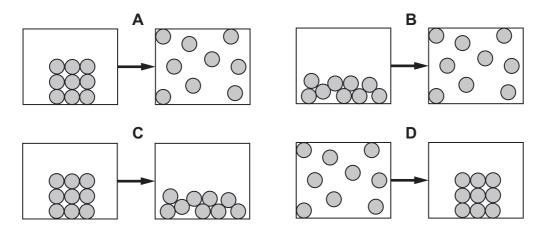

```
How does this show that the water is denser than lavender oil?
```

1 mark

(c) Rosie poured some lavender oil into an oil burner. She heated it with a candle.

The oil changed state.

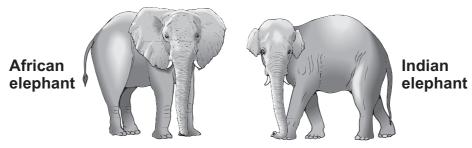

Which diagram represents this change of state? Write the letter.

Give the reason for your answer.

| 6a | | | |
|--------|--|--|--|
| 1 mark | | | |

(b) Ben filled two identical cans with 250 cm³ of hot water. He wrapped strips of metal around them to model the elephants' ears.

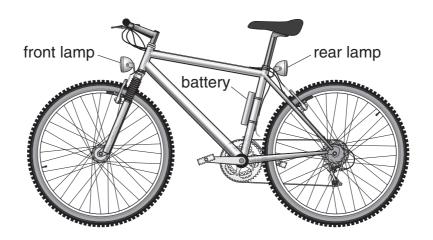

He recorded the temperature of the water in each can every 5 minutes. The table shows his results.

| time (minutes) | temperature (°C) | | |
|----------------|------------------|-------|--|
| time (minutes) | can A | can B | |
| 0 | 60 | 60 | |
| 5 | 54 | 57 | |
| 10 | 50 | 54 | |
| 15 | 46 | 52 | |
| 20 | 43 | 50 | |

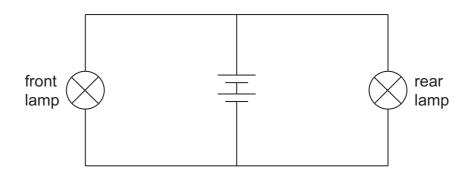

| (i) | Ben started with water at the same temperature in both cans. Give one other way he made his test fair. |
|--------------|---|
| | |
| (ii) | He plotted the results for can A and can B and drew lines of best fit. |
| emper °C) | 50 45 40 0 5 10 15 20 |
| | time (minutes) |
| | Why is it more useful to present these results in a graph rather than a table? |
| | |
| (iii) | The water in can A cooled more quickly than the water in can B . Does this support your prediction in part (a)? Tick the correct box. |
| | yes no |
| | Explain your answer. |
| | |
| | |
| ter | n repeated the investigation. Instead of a thermometer he used a nperature sensor and a data logger. ye one advantage of this. |

7. Nina's bicycle has a front lamp and a rear lamp. Both lamps are connected to the same battery.

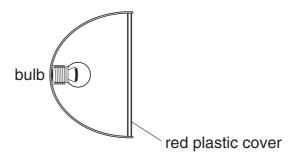

(a) The circuit diagram for the lamps is drawn below.

- 7ai
- 7aii
- (i) On the circuit diagram above, place a letter A to show the position of a switch to turn only the front lamp on and off.
- (ii) On the circuit diagram above, place a letter B to show the position of a switch to turn both lamps on and off at the same time.

(b) The bulb in the rear lamp gives out white light. White light is a mixture of all the colours of light.

The plastic cover acts as a red filter. Red light passes through the filter.

What happens to the other colours that do **not** pass through?

7b

(c) Nina replaces the battery with a generator called a dynamo. When Nina pedals her bicycle, the back wheel turns the generator.

Complete the sentences below using words from the box.

| chemical | electrical | | gravitational | |
|----------|------------|-------|---------------|--|
| kinetic | light | sound | thermal | |

| As Nina pedals, | _ energy in her muscles is |
|--|------------------------------------|
| changed to kinetic energy. | |
| When the generator turns, kinetic energy | is changed to useful |
| energy in the v | vires. This energy in the wires is |
| changed to useful | energy in the bulb. |
| When the lamps are on, some of the ene | ergy in the bulb is wasted as |
| energy. | |

Kava is a drug. It dissolves in alcohol but **not** in water.
 A scientist tested kava to see if it can reduce the human heart rate.
 Before testing the drug on humans, she tested it on water fleas.

(a) She gave two groups of water fleas a different treatment.

| group | number of water fleas | treatment |
|-------|--------------------------|--|
| 1 | 20 | one drop of kava dissolved in alcohol |
| 2 | 20 | one drop of alcohol |

- She placed the water fleas in a dish of water under a microscope.
- She measured the heart rate of each water flea before the treatment.
- She waited 30 seconds after the treatment was given and measured the heart rate again.
- She calculated the average heart rate for each group.

| | (i) | Why did the scientist measure the heart rate of the water fleas before the treatment? |
|--------------|------|--|
| 9ai | | |
| nark | (ii) | After giving the treatment, why did she wait for 30 seconds before measuring the heart rate? |
| 9aii nark | | |

(iii) How could the scientist increase the reliability of the investigation? (b) The results of the experiment are shown below. 45 Key average 40 before treatment heart rate (beats per after treatment minute) 35 group group 1 2 (i) How will the results from group 2 help in the experiment? (ii) How can the scientist use the results above to work out the effect of kava **alone** on the average heart rate of water fleas? From this experiment, why could she not be certain how kava will affect humans? maximum 6 marks

11. (a) Satish poured some water into a long tank in the school laboratory. He used a plunger at one end to make a wave.

not to scale

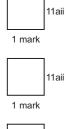

(i) The wave travelled to the other end of the tank. The speed of the wave was 2 m/s.

How long did the wave take to travel to the other end?

(ii) Satish investigated how the depth of water in his tank affected the speed of the waves.

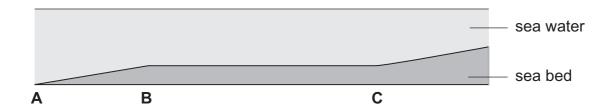

Write a plan to show how he could do this.

(b) Satish found the following information about waves in the sea.

| depth of sea water (m) | speed of wave (m/s) |
|---------------------------|------------------------|
| 10 | 9.9 |
| 20 | 14.0 |
| 30 | 17.2 |
| 40 | 19.8 |

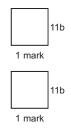

The diagram below shows how the depth of sea water changes.

Use the information in the table above to help you describe the speed of a wave as it travels from **A to B** and from **B to C**.

A to B

B to C _____

maximum 6 marks

maximum 6 marks

13. Oliver clamped a wooden plank to a desk. There was a 40 cm overhang as shown in diagram 1.

Oliver added masses to the end of the wooden plank as shown in diagram 2. He measured the sag.

The graph below shows his results.

(a) What measurements would Oliver need to take to work out the sag?

(b) Oliver repeated his test with a new plank with an 80 cm overhang. His results are shown below.

| mass (g) | sag (cm) |
|----------|----------|
| 0 | 1.0 |
| 500 | 15.0 |
| 1000 | 25.0 |
| 1500 | 31.0 |
| 2000 | 35.0 |

- (i) Plot the results from Oliver's second test on the grid opposite. Use the points to draw a line of best fit.
- (ii) In the second test the plank sagged with **no** mass added to it. Explain what caused this sag.
- (c) Compare the results of Oliver's two tests.
 - (i) How are the results **similar** for each test?

(ii) How are the results **different** in the second test?
