### Introduction

The year 8 optional mathematics tests provide schools with a tool to help monitor pupils' progress against national standards in key stage 3 and an instrument for gathering assessment evidence in support of teacher judgements.

The test materials may be used in whole or in part at any point during key stage 3 to provide valuable qualitative information about pupils' strengths and weaknesses. Teachers may choose to use the materials alongside written work, class discussions and group activities in a variety of contexts. When used in this way the materials can yield evidence in support of teacher assessment, including national curriculum level judgements.

The tests follow a similar structure to the previously statutory end of key stage 3 mathematics tests taken by pupils in year 9. They can be administered and marked formally, and the results may be used to determine a national curriculum level. Even when used in this way, there is still useful additional information that can be discerned from pupils' responses. This guide explains the options in more detail.

The mathematics tests are available in two tiers, covering levels 4–6 and 5–7.

**BLANK PAGE** 

4

# **Supporting teacher assessment**

The optional key stage 3 mathematics tests aim to be supportive of school assessment arrangements and can be used as part of an integrated approach to teacher assessment. Assessing Pupils' Progress (APP) material may be used alongside these tests. APP is a structured approach to periodic assessment, enabling teachers to:

- use information about pupils' strengths and weaknesses to improve teaching, learning and rates of pupils' progress;
- track pupils' progress over a key stage or longer.

The optional test materials may be used in a variety of contexts in order to give pupils the broadest opportunities to show what they can do. Individual questions and pupil responses can be used to stimulate class discussions and group activities, contributing to a rich evidence-base for teacher assessment. The notes on individual questions make some specific suggestions for teaching and learning (see Section B).

# **Section A: Formal administration**

### **Administering the tests**

The guidance in this section must be followed in order to produce a national curriculum level for each pupil using the level thresholds supplied (page 60).

This information is provided for anyone who is involved in administering the tests, including teachers, other members of the school staff, and other adults who may be assisting in the test administration.

The tests should be carried out under test conditions; they may be held in a school hall, classroom or any other suitable accommodation.

#### Who are the tests suitable for?

The year 8 optional tests are aimed at pupils working within levels 4 to 7. The tests are supplied in two tiers, one covering levels 4 to 6 and the other covering levels 5 to 7. The lower tier is more appropriate for pupils working at levels 4 and 5, while the higher tier is for those working at levels 6 and 7.

#### Test papers – Paper 1 and Paper 2

For each tier there are two written papers, each of 60 marks. Paper 1 is a noncalculator test and Paper 2 is a calculator-allowed test. Both tests are one hour long.

Each test consists of about 30 questions. Where a question part is worth more than one mark, pupils are able to obtain partial credit for their working even if the final answer is incorrect. Pupils write their working and answers in spaces provided within the answer booklets. Questions are of a variety of types. Some are context-free, but others are placed within everyday, classroom or mathematical contexts. Some questions are routine tests of skill, while others assess application or understanding. Pupils may be required to organise a multistep calculation for themselves. Some questions ask pupils to explain their reasoning.

#### Summary of the year 8 optional tests

- Paper 1 at tier 4 to 6 or tier 5 to 7, one hour, 60 marks
- Paper 2 at tier 4 to 6 or tier 5 to 7, one hour, 60 marks
- Total marks available 120 (60 + 60)

### Equipment needed for the tests

In addition to pens, pencils, rubbers and rulers, the following equipment will need to be available to pupils when they take the tests:

Levels 4–6	Paper 1 Angle measurer, tracing paper (optional) Paper 2 Calculator
Levels 5–7	<ul><li>Paper 1 Angle measurer, pair of compasses, tracing paper (optional)</li><li>Paper 2 Calculator, pair of compasses</li></ul>

Pupils must not have access to a calculator during Paper 1.

#### Timing

Pupils should be given 60 minutes to complete each test. You may indicate to the pupils when they are halfway through the time allowed for the test, and again a few minutes before they have to stop.

#### Introducing the tests

Teachers are advised to draw pupils' attention to the 'Remember' section on the front cover of the test booklet, and to the instructions and formulas on page 2 or 3.

It is important to brief pupils fully before they begin each paper. Some of the points that you might want to cover are:

- The test is one hour long.
- Check the list of equipment on the front cover of your paper, to make sure you have what you may need.
- If you want to change your answer, put a neat line through the response you don't want. For changes to diagrams use a rubber.
- The test starts with easier questions. Try to answer all the questions in the booklet.
- Write all your answers and working in the test booklet do not use rough paper. Marks may be awarded for your working even if your answer is wrong.

- Remember to check your work carefully.
- I will tell you when we are halfway through the test and also tell you when we are into the last five minutes. I will tell you when the test is over and you must stop writing.
- If you have any urgent questions during the test you should put up your hand and wait for someone to come to you. You must not talk to each other.

For Paper 2 only:

- Make sure you have the same tier as you had for Paper 1.
- You may use a calculator in this test. Make sure you have your calculator and that it is working properly.

### Helping pupils during the tests

Teachers should ensure that pupils are clear about what they have to do but should not provide help with the mathematics being tested. Teachers should not help by explaining specific mathematical terms, nor by interpreting graphs or mathematical tables or diagrams. If a pupil asks for clarification of a mathematical symbol or notation then the teacher may read it to the pupil but should not indicate the operation or process to be used.

8

### **Access arrangements**

These tests have been designed to be accessible to the great majority of pupils working at levels 4–7 in mathematics. Schools are free to make adaptations to the tests that will improve their accessibility for pupils with special educational needs and pupils for whom English is an additional language. In making any changes to the way the tests are administered, the focus should be on the assessment needs of the individual pupil. Any adaptations should be similar to those made to the materials with which pupils work in the classroom.

### **Examples of appropriate adaptations**

School-based adaptations to the tests may include:

- allowance of up to 25 per cent additional time
- use of readers, signers, amanuenses
- provision of tactile shapes and number cards
- separating the tests into sections, taping, photocopying onto coloured paper, use of coloured overlays, use of apparatus
- enhancing the shading on diagrams, including charts and graphs, to increase visual clarity
- enlarging diagrams, cutting them out, embossing or mounting them on card or other material according to normal classroom practice
- translation of words or phrases in the test papers that are likely to prove difficult for pupils for whom English is an additional language, and also if required for pupils who use British sign language (BSL) or other signsupported communication
- use of bilingual dictionaries.

Access arrangements should not provide an unfair advantage. It is important to ensure that any assistance given does not alter the nature of the test questions, and that any answer given is the pupil's own.

Modified large print, enlarged print and Braille test papers for visually impaired pupils are available from the QCDA modified test agency. Additional guidance notes for teachers administering the modified versions of the tests are supplied with the test papers. Notes are available from the QCDA modified test agency to assist with administering the written tests to pupils with hearing impairment and pupils who use sign language.

### Questions that must not be enlarged

If your school needs to enlarge questions or parts of questions to meet the specific requirements of individual pupils, and has not ordered the enlarged papers from the QCDA modified test agency, the following questions must **not** be enlarged. This is because enlargement may affect the pupils' responses.

Paper 1	Levels 4–6	Levels 5–7
Measure	3	
Fruit Pie	23	15
Cut		21
Rhombus		30

Paper 2	Levels 4–6	Levels 5–7
Paper clip	13	4
Locus		27

If you have any questions about ordering the modified tests, contact the QCDA modified optional test agency on: 0844 500 6727.

For further guidance on access arrangements please refer to *Access arrangements*, available on the QCDA website at: www.qcda.gov.uk/assessment/3798.aspx

### Marking the tests

### The structure of the mark scheme

Pages 12–19 of this booklet contain guidelines on how to mark the tests.

The guidance in this section must be followed in order to produce a national curriculum level for each pupil using the level thresholds supplied (page 60).

This general guidance should be observed unless specific instructions to the contrary are given, and should be read before marking begins. It could form the basis of departmental INSET to ensure standardisation of marking within, and between, schools.

The marking information for questions within the tests is set out in the form of tables which start on page 20 (Paper 1) and page 40 (Paper 2). The columns to the left of each table provide a quick reference to the question number, question part and the total number of marks available for that question part. There is also an indication of where it may be necessary to refer to the general guidance.

The Correct response column usually includes two types of information:

- a statement of the requirements for the award of each mark, with an indication of whether credit can be given for correct working, and whether the marks are independent or cumulative
- examples of some different types of correct response, including the most common.

The Additional guidance column indicates alternative acceptable responses, and provides details of specific types of response that are minimally acceptable or unacceptable. Other guidance, such as when 'follow-through' is allowed, is provided as necessary.

Questions with a *Using and applying mathematics* element are identified in the mark scheme by an encircled U with a number that indicates the significance of using and applying mathematics in answering the question. The U number can be any whole number from 1 to the number of marks in the question.

For some graphical and diagrammatic responses, including those in which judgements on accuracy are required, marking overlays have been provided (see the centre pages of this booklet).

### Recording marks on the test paper

All questions, even those not attempted by the pupil, should be marked, with a 1 or a 0 entered in each marking space. Where two marks can be split into one mark gained and one mark lost, with no explicit order, then this should be recorded by the marker as 1

0

The total marks awarded for a double page can be written in the box at the bottom of the right-hand page, enabling the correct total to be more easily transferred to the front of the test paper.

### **Finding levels**

A total of 120 marks is available (60 from Paper 1 and 60 from Paper 2). The sum of the marks allocated from these two components indicates the level at which the pupil is working.

The level thresholds can be found on page 60.

# **General guidance for marking**

Answers that are numerically or algebraically equivalent are acceptable unless the mark scheme states otherwise.

In order to ensure consistency of marking, the most frequent procedural queries are listed on the following two pages with the prescribed correct action. This is followed by further guidance relating specifically to the marking of questions that involve money, negative numbers, algebra, time, coordinates, probability, or tick-box and explanation. Unless otherwise specified in the mark scheme, markers should apply the following guidelines in all cases.

### **Procedural queries**

What if	Marking procedure
The pupil's response does not match closely any of the examples given.	Markers should use their judgement in deciding whether the response corresponds with the statement of requirements given in the <b>Correct response</b> column. Refer also to the <b>Additional guidance</b> column.
The pupil has responded in a non- standard way.	Calculations, formulae and written responses do not have to be set out in any particular format. Pupils may provide evidence in any form as long as its meaning can be understood. Diagrams, symbols or words are acceptable for explanations or for indicating a response. Any correct method of setting out working, however idiosyncratic, is acceptable. Provided there is no ambiguity, condone the continental practice of using a comma for a decimal point.
The pupil has made a conceptual error.	In some questions, a method mark is available provided the pupil has made a computational, rather than conceptual, error. A computational error is a 'slip' such as writing $4 \times 6 = 18$ in an otherwise correct long multiplication. A conceptual error is a more serious misunderstanding of the relevant mathematics; when such an error is seen no method marks may be awarded. Examples of conceptual errors are: misunderstanding of place value, such as multiplying by 2 rather than 20 when calculating $35 \times 27$ ; subtracting the smaller digit from the larger in calculations such as $45 - 26$ to give the answer 21; incorrect signs when working with negative numbers.
The pupil's accuracy is marginal according to the overlay provided.	Overlays can never be 100% accurate. However, provided the answer is within, or touches, the boundaries given, the mark(s) should be awarded.
The pupil's answer correctly follows through from earlier incorrect work.	Follow-through marks may be awarded only when specifically stated in the mark scheme, but should not be allowed if the difficulty level of the question has been lowered. Either the correct response or an acceptable follow-through response should be marked as correct.
There appears to be a misreading affecting the work.	This is when the pupil misreads the information given in the question and uses different information. If the original intention or difficulty level of the question is not reduced, deduct only one mark. If the original intention is changed or the difficulty level is reduced then do not award any marks for the question part.
The correct answer is in the wrong place.	Where a pupil has shown understanding of the question, the mark(s) should be given. In particular, where a word or number response is expected, a pupil may meet the requirement by annotating a graph or labelling a diagram elsewhere in the question.

И	/ha	nt .	if	•

The final answer is wrong but the correct answer is shown in the working.

### Marking procedure

Where appropriate, detailed guidance will be given in the mark scheme and must be adhered to. If no guidance is given, markers will need to examine each case to decide whether:

working.			
0	the incorrect answer is due to	o a transcription error	If so, award the mark.
	in a question not testing accu answer has been given but th	•	If so, award the mark.
	the pupil has continued to gi working which does not con done		If so, award the mark.
	the pupil has continued, in the pupil has continued, in the question, to give redundant of does contradict work already	extra working which	If so, do not award the mark. Where a question part carries more than one mark, only the final mark should be withheld.
The pupil's answer is correct but the wrong working is seen.	A correct response should al states otherwise.	ways be marked as correc	t unless the mark scheme
The correct response has been crossed or rubbed out and not replaced.	Mark, according to the mark that has not been replaced.	x scheme, any legible cross	ed or rubbed out work
More than one answer is given.	If all the answers given are c should be awarded unless pr incorrect responses are given	ohibited by the mark sche	me. If both correct and
The answer is correct, but in a later part of the question the pupil has contradicted their response.	A mark given for one part should not be disallowed for working or answers given in a different part, unless the mark scheme specifically states otherwise.		
The pupil has drawn lines which do not meet at the correct point.	Markers will interpret the photon of the formation of the circle accepted to the photon of the circle accepted to	us 2mm with centre at the

### Marking specific types of question

<b>Responses involving money</b> For example: £3.20 £7				
Accept ✓	Do not accept ×			
<ul> <li>✓ Any unambiguous indication of the correct amount</li> <li>eg £3.20(p), £3 20, £3,20,</li> <li>3 pounds 20, £3-20,</li> <li>£3 20 pence, £3:20,</li> <li>£7.00</li> </ul>	Incorrect or ambiguous indication of the amount eg £320, £320p or £700p			
<ul> <li>✓ The unit, £ or p, is usually printed in the answer space. Where the pupil writes an answer outside the answer space with no units, accept responses that are unambiguous when considered alongside the given units eg with £ given in the answer space, accept 3.20 7 or 7.00</li> <li>✓ Given units amended eg with £ crossed out in the answer space, accept 320p</li> </ul>	<ul> <li>Ambiguous use of units outside the answer space</li> <li>eg with f given in the answer space, do not accept 3.20p outside the answer space</li> <li>Incorrect placement of decimal points, spaces, etc or incorrect use or omission of 0</li> <li>eg £3.2, £3 200, £32 0, £3-2-0 £7.0</li> </ul>			

<b>Responses involving negative numbers</b> For example: -2		
Accept ✓ Do not accept ×		
	To avoid penalising the error below more than once within each question, do not award the mark for the <i>first</i> occurrence of the error within each question. Where a question part carries more than one mark, only the final mark should be withheld. Incorrect notation eg 2-	

<b>Responses involving the use of algebra</b> For example: $2 + n$ $n + 2$ $2n$ $\frac{n}{2}$ $n^2$				
Accept ✓	Take care ! Do not accept ×			
<ul> <li>✓ Unambiguous use of a different case or variable</li> <li>eg N used for n</li> <li>x used for n</li> </ul>	! Unconventional notation eg $n \times 2$ or $2 \times n$ or $n2$ or $n + n$ for $2n$ $n \times n$ for $n^2$ $n \div 2$ for $\frac{n}{2}$ or $\frac{1}{2}n$ 2 + 1n for $2 + n2 + 0n$ for $2Within a question that demandssimplification, do not accept as partof a final answer involving algebra.Accept within a method whenawarding partial credit, or within anexplanation or general working.$			
	Embedded values given when solving equations eg in solving $3x + 2 = 32$ , $3 \times 10 + 2 = 32$ for $x = 10$			
	To avoid penalising the two types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of each type within each question. Where a question part carries more than one mark, only the final mark should be withheld.			
✓ Words used to precede or follow equations or expressions eg $t = n + 2$ tiles or tiles = $t = n + 2$ for $t = n + 2$	Words or units used within equations or expressions eg $n$ tiles + 2 n cm + 2 Do not accept on their own. Ignore if accompanying an acceptable response.			
✓ Unambiguous letters used to indicate expressions eg $t = n + 2$ for $n + 2$	Ambiguous letters used to indicate expressions eg $n = n + 2$ for $n + 2$			

<b>Responses involving time</b> <b>A time interval</b> For example: 2 hours 30 minutes		
Accept ✓	Take care ! Do not accept ×	
<ul> <li>✓ Any unambiguous indication eg 2.5 (hours), 2h 30</li> <li>✓ Digital electronic time ie 2:30</li> </ul>	<ul> <li>Incorrect or ambiguous time interval eg 2.3(h), 2.30, 2-30, 2h 3, 2.30 min</li> <li>The unit, hours and/or minutes, is usually printed in the answer space. Where the pupil writes an answer outside the answer space, or crosses out the given unit, accept answers with correct units, unless the question has specifically asked for other units to be used.</li> </ul>	
<b>A specific time</b> For example: 8:40am	17:20	
Accept ✓	Do not accept x	
<ul> <li>Any unambiguous, correct indication eg 08.40, 8.40, 8:40, 0840, 8 40, 8-40, twenty to nine, 8,40</li> <li>Unambiguous change to 12 or 24 hour clock eg 17:20 as 5:20 pm, 17:20 pm</li> </ul>	<ul> <li>Incorrect time eg 8.4am, 8.40pm</li> <li>Incorrect placement of separators, spaces, etc or incorrect use or omission of 0 eg 840, 8:4:0, 084, 84</li> </ul>	

<b>Responses involving coordinat</b> For example: (5, 7)	tes		
Accept 🗸	Do not accept ×		
✓ Unconventional notation eg (05, 07) (five, seven) $x^{y}$ (5, 7) (x = 5, y = 7)	✗ Incorrect or ambiguous notation eg (7, 5) y x (7, 5) (5x, 7y) (5 <sup>x</sup> , 7 <sup>y</sup> ) (x − 5, y − 7)		

<b>Responses involving probabili</b> A numerical probability should be express percentage only For example: 0.7 $rac{7}{10}$ 70%	-
Accept ✓	Take care ! Do not accept ×
<ul> <li>✓ Equivalent decimals, fractions and percentages</li> <li>eg 0.700, <sup>70</sup>/<sub>100</sub>, <sup>35</sup>/<sub>50</sub>, 70.0%</li> </ul>	The first <b>four</b> categories of error below should be ignored if accompanied by an acceptable response, but should not be accepted on their own. However, to avoid penalising the first <b>three</b> types of error below more than once within each question, do not award the mark for the <i>first</i> occurrence of each type of error unaccompanied by an acceptable response. Where a question part carries more than one mark, only the final mark should be withheld
✓ A probability correctly expressed in one acceptable form which is then incorrectly converted, but is still less than 1 and greater than 0 eg $\frac{70}{100} = \frac{18}{25}$	A probability that is incorrectly expressed eg 7 in 10 7 over 10 7 out of 10 7 from 10
	A probability expressed as a percentage without a percentage sign
	! A fraction with other than integers in the numerator and/or denominator
	A probability expressed as a ratio eg 7 : 10, 7 : 3, 7 to 10
	<ul> <li>A probability greater than 1 or less than 0</li> </ul>

<b>Responses involving tick-box a</b> For example: Yes No Canno Explain your answer	-		
Accept ✓	Do not accept x		
<ul> <li>Where an incorrect box is ticked and the explanation is correct:</li> <li>Where the tick-box options are Yes/No only, accept a correct explanation that is better than minimally acceptable.</li> </ul>	· · · · · · · · · · · · · · · · · · ·

<u> </u>	stion							Hats
4-6 11				Correct resp	oonse		Additional guid	
		2m	Makes all fou	ir correct entrie	S	✓ <i>Tally man</i> Accept ta	<b>rks</b> lly marks instea	d of numbers
				Wearing hats	Not wearing hats	✓ Fractions	out of 13 and 2	17
			Adults	8	5	ie for 2m		
			Children	11	6			
							Wearing hats	Not wearing hats
		or				Adults	8/13	5/13
		1m	Makes three of	correct entries		Children	11/17	6/17
			or Row for adul <b>and</b> row for child:	ts sums to 13 ren sums to 17				

Que	er & stion 5–7			Dog food
12	4		Correct response	Additional guidance
		3m	8	<ul> <li>✓ Indication that there will be some food left after 8 days</li> </ul>
		or 2m	Shows (or clearly implies) in working that the total for both dogs for one day is 600g, and Shows that 5000 must be divided by 600, or that 5 must be divided by 0.6 eg • $8\frac{1}{3}$ • 5000 ÷ 600 • $10 \times 0.6 = 6$ $5 \times .6 = 3$ $6 \times .6 = 3 + 0.6 = 3.6$ $7 \times .6 = 3.6 + 0.6 = 4.2$ • 4800 (grams)	
		or 1m	Shows in working that the total for both dogs for one day is 600g eg • 120 + 210 + 110 + 160 = 600 • 5 ÷ 600	
			or Correctly divides 5000 by their incorrect total in grams for both dogs for one day eg • Total for one day: 500g (incorrect) Answer: 10 days or	! Correct division of an incorrect total: the answer must be rounded to the nearest integer
			Correctly divides 5 by their incorrect total in kilograms for both dogs for one day	
			or Completes the calculation correctly, but fails to convert units, leading to an answer with the digits 8(33) eg • 833 • 0.8	
		(U1)		

Que	er & stion 5–7			Fill
13	5		Correct response	Additional guidance
a	a	1m	8	✓ Tiles drawn Accept tiles correctly drawn, but no
		(U1)		number written in the answer space
b	b	1m	Draws tiles correctly eg	<ul> <li>✓ Unambiguous diagram</li> <li>eg accept only the diagonal lines drawn</li> </ul>
				<ul> <li>Missing or incorrect diagram</li> <li>Do not accept only the number of tiles</li> <li>given, with no diagram or an incorrect</li> <li>diagram</li> </ul>

	er & stion 5–7			Blackberries
14	6		Correct response	Additional guidance
а	a	1m	6	
b	b	1m	1.2(00) or $1\frac{1}{5}$	<ul> <li>✓ Follow-through from part (a) Accept their (a) ÷ 5, provided the result of their division is not a whole number</li> </ul>
с	с	1m (U1)	1.2(00) or $1\frac{1}{5}$	<ul> <li>✓ Follow-through as their (b) given in part (c)</li> </ul>

Que	er & stion			Area
4-6 15			Correct response	Additional guidance
a	a	1m	<ul> <li>Gives correct explanation for method 1</li> <li>eg</li> <li>She split the pentagon into smaller triangles, worked out their areas and added them up</li> <li>She's counted the squares in each section and added them up</li> <li>She draws a line through the pentagon and then another and worked out the area for each part and then added them together</li> </ul>	<ul> <li>✓ Minimally acceptable response eg         <ul> <li>She splits the inside up</li> <li>She's added them all up to make 8</li> <li>She counted the squares</li> <li>She added up the numbers</li> <li>She found the area of each section</li> </ul> </li> <li>× Incomplete explanation eg do not accept         <ul> <li>She has counted the squares approximately</li> <li>She added up the sides</li> </ul> </li> <li>× Incorrect explanation eg         <ul> <li>She 's added them all up</li> </ul> </li> </ul>
b	b	1m	<ul> <li>Gives correct explanation for method 2, with reference to subtraction</li> <li>eg</li> <li>She drew a rectangle around the pentagon. She worked out the area of the rectangle that is not part of the pentagon. She took that away from the area of the rectangle.</li> <li>She counted the whole shape including the outside. The total area adds up to 15. Then she takes away the area of the parts around the shape.</li> <li>She found the area of the grid and found the area of the outside. The area of the grid minus the area of the outside = total</li> </ul>	<ul> <li>Minimally acceptable response eg</li> <li>She has taken the total amount of squares (covered and uncovered), and has subtracted numbers of squares that she has divided into triangles to find the area</li> <li>Condone <ul> <li>She has taken away the area on the outside of the pentagon (no reference to the area of the rectangle)</li> </ul> </li> <li>Minor inaccuracy <ul> <li>eg</li> <li>She drew a square (incorrect) around the pentagon and worked out the area of it and worked out the area of the outside. Then took it away from the rectangle.</li> <li>She has made her pentagon into a quadrilateral and then worked the area out of that. Then she works out the areas of the 3 (incorrect) triangles that she drew on and added them together. Then she subtracted the triangles from the quadrilateral.</li> </ul> </li> <li><i>Incomplete explanation</i> <ul> <li>eg</li> <li>She splits the outside up</li> <li>She counted the outside squares</li> <li>She drew a rectangle and counted all the squares in it</li> <li>The difference between it and a rectangle</li> </ul> </li> </ul>

Que	er & stion			Wire
16			Correct response	Additional guidance
		2m or 1m	21 Shows a complete correct method with not more than one computational error eg • $\frac{2}{6} \frac{3}{1} \frac{3}{20}$ (carried 2 is incorrect) Answer: 23 • 10 is 6 tonnes 20 is + 6 tonnes 12 tonnes 21 is + 6 tonnes (incorrect) 18 tonnes Answer: 20 • Answer: 12.6 (tonnes) or Gives an answer greater than 21 but less than or equal to 22 eg • 22 • 21 and a bit • $21\frac{1}{2}$ • 21.666	<ul> <li>* Place value errors eg do not accept . 1300 ÷ 6 = 216</li> <li>* Incomplete response Calculation given but no answer attempted eg . 13 ÷ 6</li> <li>! Condone . use of incorrect units</li> </ul>

Tier & Question		Steps
1-6 5-7 17 9	Correct response	Additional guidance
U1	Gives a correct explanation The most common correct explanations: Indicates that the height of the steps or of the flights of steps could vary eg • The height/ depth/ rise/ slope/ steepness of the steps could be different • It depends on the height of each step • 1 step in Castle could be 2 steps in Windy • The height of one flight could be different Indicates that the total height of the steps does not equal the height of the tower eg • The steps don't go to the top • There could be steps up the hill to the tower Indicates that the shape of the staircase could be different eg • The steps might not go straight up • There could be more than one staircase in the tower • It's got a lift/ ramp/ slope	<ul> <li>Minimally acceptable explanation that refers to the size of the steps eg accept <ul> <li>Different sized stairs</li> <li>The steps could be different</li> <li>How big are the steps?</li> <li>The staircase could be uneven</li> <li>More little steps</li> </ul> </li> <li><i>Reference to other dimensions of the steps if the height is also mentioned</i> eg accept <ul> <li>The steps could be wider or longer or taller</li> </ul> </li> <li><i>Explanation that refers specifically to the width or length of the steps, and not to the height</i> eg do not accept <ul> <li>The steps could be wider</li> </ul> </li> <li><i>Explanation that could refer to the towers rather than the steps</i> eg do not accept <ul> <li>You cannot tell how big they are</li> <li>They could be different heights</li> </ul> </li> <li><i>Explanation that the height of the tower is not directly proportional to the number of steps</i> eg do not accept <ul> <li>Half the stairs doesn't mean half the height</li> </ul> </li> </ul>

		1m	-16		

Tier & Question 4–6 5–7		Marking overlay available	Fruit pie	
23 15	Correct response		Additional guidance	
	3m	Draws a correct line within the smaller tolerance as shown on the overlay and labels the larger sector 'banana' and the smaller sector 'other'		
	or 2m or 1m	Draws a correct line within the larger tolerance as shown on the overlay and labels the larger sector 'banana' and the smaller sector 'other' or Draws a correct line within the smaller tolerance as shown on the overlay but does not label both sectors or labels them incorrectly or Shows evidence of $\frac{16}{36} \times 360$ or $\frac{6}{36} \times 360$ , or 160° or 60° or 300° Draws a correct line within the larger tolerance as shown on the overlay but does not label both sectors or labels them incorrectly or Shows that one unit is represented by 10°		

Tier & Question 4–6 5–7				Seventeen
	16		Correct response	Additional guidance
		2m or 1m	Matches all four calculations correctly, ie	
			Matches at least two calculations correctly	

Que	er & stion 5–7			Spinner
	17		Correct response	Additional guidance
		1m	75	<ul> <li>✓ An indication that the estimate is approximate eg accept         <ul> <li>About 75</li> </ul> </li> <li>× A probability eg do not accept         <ul> <li>• <sup>75</sup>/<sub>100</sub></li> <li>• 75%</li> </ul> </li> </ul>

	er & stion								Possible shapes
4–6	5–7		1						
26	18		Correct response					Additional guidance	
		2m	Makes all seven correct entries, ie						! Ignore drawings, whether correct or incorrect
			Number of sides	One right angle	Two right angles	Three right angles	Four right angles	Five right angles	
			4 sides	$\checkmark$	$\checkmark$	×	<ul> <li>✓</li> </ul>	×	
			5 sides	~	~	<ul> <li>✓</li> </ul>	×	×	
		or 1m	Makes s	ix correc	ct entries				

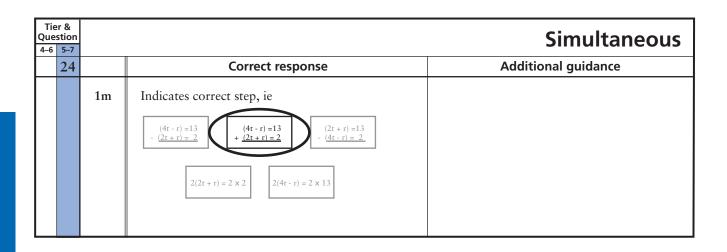

Que	er & stion 5–7		See General guidance for marking – Algebra	Tiles	
27	19		Correct response	Additional guidance	
	a	1m	$n^2 + 2$	<ul> <li>✓ Throughout the question, accept algebraically equivalent unsimplified expressions</li> </ul>	
	b	1m (U1)	$2n^2 + 2$		

er & stion 5–7			Air traffic
20		Correct response	Additional guidance
	1m	<ul> <li>Describes a positive correlation</li> <li>eg</li> <li>The more flights, the more passengers</li> <li>They go up together</li> <li>There are about 10,000 passengers for every 100 flights</li> <li>Passengers = 100 × flights</li> </ul>	<ul> <li>✓ Minimally acceptable explanation eg accept         <ul> <li>A good correlation</li> <li>It's positive</li> <li>Directly proportional</li> <li>They both go up</li> </ul> </li> <li>× A description that does not imply a relationship         eg do not accept         <ul> <li>They go up</li> </ul> </li> </ul>

Que	er & stion 5–7	Marking overlay available		
	21		Correct response	Additional guidance
		1m	Draws a correct rectangle within the tolerance as shown on the overlay	

Que	er & stion 5–7			Matching
	22		Correct response	Additional guidance
		3m	Matches all five calculations correctly, ie	
		or 2m	Matches at least three calculations correctly	
		or 1m U1	Matches at least two calculations correctly	

Que	er & stion 5–7			Averages
	23		Correct response	Additional guidance
		1m	maximum	
		1m (U1)	mean	

er & estion 5–7			Crisps
25		Correct response	Additional guidance
a	2m	Completes all four rows correctly, ie	
		True Either False	
		✓ <i>✓</i>	
	or 1m U1	Completes three rows correctly	
b	1m	Gives a correct statement eg Some, girls None, girls Both, genders/ sexes Most, boys/ girls A fraction, boys/ girls Half, boys/ girls Not all girls [a specific positive whole number], boys/ girls More, boys/ girls Fewer, boys/ girls	<ul> <li>Statements that either must be true or must be false eg do not accept         <ul> <li>Most, pupils</li> </ul> </li> </ul>

Que	er & stion 5–7			Percent
	26		Correct response	Additional guidance
	a	1m	25; 400	
	b	1m	500	

Que	er & stion 5–7			Pi
	27		Correct response	Additional guidance
		1m	Indicates the correct sentence, ie  The circumference of a circle divided by its diameter.	

Que	er & stion 5–7		See General guidance for marking – Tick-box and	explanation Price change
	28		Correct response	Additional guidance
		1m (U1)	<ul> <li>Indicates No and gives a correct explanation eg</li> <li>Explains that the amount in the first and the second step are different <ul> <li>The saving is 50% from a bigger amount</li> <li>Gives a specific example</li> <li>£5 last year, £7.50 this year, £3.75 next year</li> <li>Gives the correct percentage</li> <li>It will cost 75% of last year</li> </ul> </li> </ul>	<ul> <li>✓ Minimally acceptable response eg         <ul> <li>No, because you would find 50% of this year's price (implies different amount)</li> <li>No - 10 15 7.5</li> </ul> </li> <li>× Ambiguous explanation eg         <ul> <li>No, the price would change anyhow</li> </ul> </li> </ul>

Que	er & estion 5–7			Inequalities
	29		Correct response	Additional guidance
	а	1m	Indicates the correct inequality, ie $x \ge 100$ $x > 100$ $100 > x$ $100 \ge x$	
	b	1m (U1)	Indicates the correct inequality, ie $x \le 10$ $x < 10$ $10 < x$ $10 \le x$	

Que	er & stion 5–7		Marking overlay available	Rhombus
	30		Correct response	Additional guidance
		2 <i>m</i>	Constructs a completed rhombus, sides ruled, with the fourth vertex within the region as shown on the overlay, with construction arcs shown	! Use of overlay Markers should use their judgement to determine whether the construction arcs are genuine, but may use the dashed lines on the overlay as a guide
		or 1m	Draws a completed rhombus, sides ruled, with the fourth vertex within the region as shown on the overlay, but no construction arcs shown or Draws a completed quadrilateral, sides ruled and construction arcs shown, with the two new sides drawn of an equal but incorrect length	on the overlay as a guide

### Mark scheme for Paper 2

	er & stion 5–7	See General guidance for marking – Negative numbers		ers Thermometer
1			Correct response	Additional guidance
a		1m	Gives a value between 7 and 8 inclusive	
b		1m	Gives a value between –2 and –3 inclusive	<ul> <li><i>Follow-through from part (a)</i> Accept follow-through from part (a), provided the result is negative</li> <li><i>Vulabelled mark</i></li> </ul>

Que	er & stion 5–7			Square patterns
2			Correct response	Additional guidance
a		1m	4	
b		1m (U1)	19	

Que	er & estion 5–7			Hummus
3			Correct response	Additional guidance
		1m	$\begin{array}{c} 3\\ \frac{1}{4}\\ \frac{1}{4}\\ 2 \end{array}$	✓ Equivalent decimals

Qu	er & estion 5–7			Diagrams
4			Correct response	Additional guidance
		2m	Gives both correct values for both diagrams, ie 0.25 25% and 0.17 17%	<ul> <li>Ignore incorrect or missing fractions over 100</li> <li>Pupils are not required to complete the fractions for the award of the mark</li> </ul>
		or 1m	Gives both correct values for one diagram or Gives both correct decimals or Gives both correct percentages or Gives a complete correct answer for the unshaded parts of both diagrams, ie 0.75 75% and 0.83 83%	

Que	r & stion 5–7			Hexagons
5			Correct response	Additional guidance
a		1m	8	
Ь		1m (U1)	Draws a diagram of seven tiles joined 'end-to- end', or variations eg	

Tier & Question 4–6 5–7			Angle
6		Correct response	Additional guidance
	1m	Matches all three diagrams correctly, ie	

Que	er & stion 5–7			Fraction
7			Correct response	Additional guidance
		1m	$\frac{3}{8}$	
		1m	Indicates the correct shape, ie	

	r & stion 5–7			Line graph
8			Correct response	Additional guidance
а		1m	Gives a value between 13.1 and 13.4 inclusive	✓ Equivalent fractions
b		1m	Midnight on Tuesday	
с		1m	Gives a value between 11.4 and 11.6 inclusive	✓ Equivalent fractions
d		1m	Indicates the correct time, ie noon on Monday midnight on Monday noon on Tuesday midnight on Tuesday	

	er & stion			Picture
9	5-7		Correct response	Additional guidance
		1m	39	
		(U1)		

Tie Ques 4–6	stion			Factors
10	1		Correct response	Additional guidance
a		1m	Gives all six correct values in any order, ie 1, 2, 3, 4, 6, 12 and Gives the correct value, ie 6	
b		2m	Completes all four sentences with a correct value, ie 4 factors: gives 6 or 8 3 factors: gives 4 or 9 2 factors: gives 2, 3, 5 or 7 1 factor: gives 1	
		or 1m	Completes three sentences with a correct value	

Que	er & estion 5-7			Towers
11	2		Correct response	Additional guidance
a		1m	8	
b		1m	14	

Que	Tier & Juestion See General guidance for marking – Time and Money		ey Harris	
12	3		Correct response	Additional guidance
a		1m	1 hour and 40 minutes	<ul> <li><i>Condone</i> <ul> <li>1<sup>2</sup>/<sub>3</sub> hours andminutes</li> <li> hours and 100 minutes</li> </ul> </li> </ul>
b	а	1m	Gives the correct time, ie 16:00	<ul> <li>✓ Alternative notation of the correct time eg 4(pm)</li> </ul>
с	b	1m	£ 86.80	

Que	er & stion 5–7			Paper clip
13	4		Correct response	Additional guidance
		1m	Gives a value in the range 8 to 13 inclusive	

Que	er & stion 5–7			Triangle and square
14	5		Correct response	Additional guidance
a	a	1m	Square correctly and clearly split into triangle numbers 10 and 15, in any orientation eg	* Triangle placed inappropriately eg
b	b	1m	36 and 45 (in either order)	
с	с	1m	45, 9 (must be in this order)	
d	d	1m	66, 11 (must be in this order)	

	er & stion 5–7			Shading
15	6		Correct response	Additional guidance
а	a	1m	79	<ul> <li>✓ Unsimplified equivalent fractions eg for part (a) accept</li> <li>• 28/36</li> <li>eg for part (b) accept</li> <li>• 24/36</li> </ul>
b	b	1m	$\frac{2}{3}$	

Tie Ques 4–6			Values

			or Three correct curves	
		or 1m	All four straight lines correctly drawn as correct length or longer or Two correct curves	

# Section B: Using the outcomes of the tests

The following sections provide information about interpreting the outcomes of the year 8 optional mathematics tests. They explain how teachers can use the test scores to find out more about pupils' attainment in the national curriculum. They also present a number of key findings and useful information obtained during the development of the tests that may be used in support of teacher judgements.

### Level thresholds

In order to make use of the information in this section, you should administer the tests according to the guidance in Section A: Formal administration. It is particularly important that you observe the time limits given, follow the test instructions, and mark the questions according to the mark scheme. If you have used the tests in a different context to provide qualitative information about pupils' strengths and weaknesses then the information derived from this section will not be applicable and you should refer to the Key findings and useful information section on page 62.

In a formal administration pupils need to take both test booklets in order for the total marks to be translated into a valid national curriculum level for mathematics overall.

Leve	ls 4–6	Level	s 5–7
Level	Mark range	Level	Mark range
Below 4	0 – 21	Below 5	0 – 24
4	22 – 44	5	25 – 40
4C	22 – 29	5C	25 – 29
4B	30 – 36	5B	30 – 35
4A	37 – 44	5A	36 – 40
5	45 – 67	6	41 – 71
5C	45 – 51	6C	41 – 50
5B	52 – 59	6B	51 – 61
5A	60 – 67	6A	62 – 71
6	68 –120	7	72 –120
6C	68 – 85	7C	72 – 88
6B	86 – 104	7B	89 – 105
6A	105 –120	7A	106 –120

The following tables give an indication of the national curriculum levels for pupils attaining each of the mark ranges in the tests.

### Variability of results

Any scores derived from a test are subject to some variation according to the precise circumstances under which the test had been sat and marked. This does not mean that pupils get 'incorrect' test results, but it does mean that some caution should be exercised in translating scores which are very close to the threshold mark into an overall mathematics level for the pupil. The level thresholds provided are indicative and teachers should be aware that differences in the status, administration and marking procedures open the tests to a potentially broader range of variation than the former statutory national curriculum tests.

## **Key findings and useful information**

This section provides further support to teachers in making level-related judgements based on the outcomes of these tests.

Question number	L4-6 tier: 15	L5-7 tier: 7	
Question name	Area		
Marks	2		
Programme of Study	Geometry and measures		
The question	This question shows an irregular penta examples of two strategies that could of the pentagon. Pupils are asked to ex Pupils answering correctly demonstrat used and can explain them. This invol mathematical reasoning and making it recognise and understand the mathem to communicate that understanding m	be used in order to calculate the area explain the method used in each case. The that they recognise the methods wes engaging with implicit t explicit. This requires the ability to atical reasoning, as well as the ability

In contrast, the first involve splitting the shape, calculating the area the total.	thematical steps (adapting the shape, partial area and subtracting one from es the less complex procedure of a of each section and adding to reach	
	<ul> <li>Pupils who find the first method difficult would benefit from work based on calculating the area of compound shapes, perhaps starting from rectilinear shapes and progressing to those that include triangles.</li> <li>Pupils who explained the first method correctly but struggled with the second would benefit from exploring a variety of irregular shapes and developing strategies to turn them into shapes where the area can more easily be calculated.</li> </ul>		

Question number	L4-6 tier: n/a	L5-7 tier: 28		
Question name	Price change	Price change		
Marks	1			
Programme of Study	Number and algebra			
The question	This question focuses on a common misconception in calculating percentages. It tells pupils that a game costs 50% more this year than last year and that it will cost 50% less next year. Mike therefore concludes that the game will cost the same next year as it did last year. Pupils are asked to say whether this statement is correct and to explain their reasoning.			
Related teaching points	from working on similar problems an	l price next year. Pupils who make ercentages are about proportional ach year is different. Pupils may benefit d evaluating the outcomes. A useful with such an exercise is to ask them to ounger pupils. ctly explain their reasoning in e fact that the total price in each year e affect the percentage calculation. he price change. Pupils who only from exploring ways of explaining or written form, and in forming a		

Question number	L4-6 tier: 14	L5-7 tier: 5	
Question name	Triangle and square		
Marks	4		
Programme of Study	Number and algebra		
The question	This question requires pupils to manipulate triangle numbers to (a) form a square number, and to derive a given total using different rules (items (b), (c) and (d)). Pupils who answer part (a) correctly can use a diagram to demonstrate the relationship between square and triangle numbers. Those who answer items (b) to (d) correctly demonstrate an ability to use triangle numbers in more abstract contexts.		
Related teaching points	<ul> <li>Pupils who answered item (a) incorrectly might need to spend time developing their understanding of the concept of a triangle number and/or a square number, perhaps using multilink cubes to help make the link between the concrete shape and the more abstract number.</li> <li>Those who answered some of items (b) to (d) correctly and others incorrectly show partial understanding and may benefit from consolidation activities. Depending on the nature of their errors, this may include exploring the triangle number series, following rules for devising a sequence, or following more complex rules that refer, for example, to both a number and its position.</li> </ul>		

Question number	L4-6 tier: 18	L5-7 tier: 9	
Question name	Decoration		
Marks	3		
Programme of Study	Number and algebra; Geometry and measures		
The question	In this question, two characters are tiling a 1m by 1m space, using three different tiles. Item (a) asks pupils to calculate the cost of Jack's proposed design using 100 of tile 1, while item (b) asks them to say how many of each tile Vanessa will need in order to repeat her design, and to calculate the total cost.		
	Pupils answering (a) correctly demonstrate that they can refer back to the correct price information, accurately calculate the cost and convert from pence to pounds. Pupils answering (b) correctly can make appropriate mathematical decisions when generating a repeated pattern, calculating the number of each type of tile needed, referring accurately to the relevant information for each tile and calculating the final price. Partial credit is available for pupils who carry out some of these steps appropriately but not all of them.		
Related teaching points	Pupils who answer item (a) incorrectly may need to practise calculation in context, in particular selecting relevant information from a 'menu' of information. Some pupils will have made calculation or conversion errors in their totals and these pupils might need further practice in these areas.		
	Teaching points for pupils who made to the type of error but might include (a). Additionally, some pupils might de ability in developing effective strategie	practice in the areas identified for part emonstrate a need to consolidate their	

Question number	L4-6 tier: n/a	L5-7 tier: 18
Question name	Similar	
Marks	2	
Programme of Study	Geometry and measures	
The question	This question tells pupils that a square and an oblong each have four edges. It then asks them (a) to give another property common to every square and every oblong and (b) to give a property of the square that is not a property of the oblong.	
	Pupils who answer this question correctly are able to recognise the relevant properties, to generalise from a single instance of each shape to the entire class of that shape, and to make their understanding explicit by describing the relevant properties.	
Related teaching points	There are many possible correct answers to this question, commonly focusing on properties related to angle, edge length, number of vertices, parallel sides and symmetry.	
	A common error in part (a) is to describe the property in an ambiguous way that might apply to both shapes (eg '2 of the sides are the same length'). Pupils who make such errors may have the mathematical understanding required but find it difficult to express or generalise it. They could usefully focus on developing their skills in describing their understanding more effectively. One way to do this is to generate a series of labels showing properties that the pupil thinks are applicable to one specified shape but not to another, and to use them to label the shapes. This might highlight the fact that a property which a pupil thought was applicable to only one shape is actually applicable to both, encouraging generalisation and reflection of how best to refine descriptions.	
	Trialling indicated that some pupils do For such pupils it might be useful to in Some might also be able to consider w in this question instead of 'oblong' (the with four right angles and two pairs of length; while the term 'rectangle' applit thus including both oblongs and square	westigate the properties of oblongs. hy the term 'rectangle' was not used e term 'oblong' refers to any shape f parallel sides, each pair of a different tes to any shape with four right angles,
	Another relatively common error is to cubes or cuboids rather than squares a mistake might need to consolidate their between 2D and 3D shapes.	nd oblongs. Pupils who make this
